

DIFFERENTIAL DRIVER AND RECEIVER PAIR

Check for Samples: [SN75ALS181](#)

FEATURES

- Meets TIA/EIA-422-B, TIA/EIA-485-A, and CCITT Recommendations V.11 and X.27
- Low Supply-Current Requirements... 30 mA Max
- Driver Output Capacity...±60 mA
- Thermal Shutdown Protection
- Driver Common-Mode Output Voltage Range of -7 V to 12 V
- Receiver Input Impedance...12 kΩ Min
- Receiver Input Sensitivity...±200 mV
- Receiver Input Hysteresis...60 mV Typ
- Receiver Common-Mode Input Voltage Range of ±12 V
- Operates From Single 5-V Supply
- Glitch-Free Power-Up and Power-Down Protection

DESCRIPTION

The SN75ALS181 is a differential driver and receiver pair designed for bidirectional data communication on multipoint bus transmission lines. The design provides for balanced transmission lines and meets TIA/EIA-422-B and TIA/EIA-485-A, and CCITT recommendations V.10, V.11, X.26, and X.27.

The SN75ALS181 combines a 3-state differential line driver and a differential-input line receiver that operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected to separate pins for greater flexibility and are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$. These ports feature wide positive and negative common-mode voltage changes, making the device suitable for party-line applications.

N.C. – No internal connection

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

FUNCTION TABLES

Each Driver

INPUTS D	ENABLE DE	OUTPUTS	
		Y	Z
H	H	H	L
L	H	L	H
X	L	Z	Z

Each Receiver⁽¹⁾

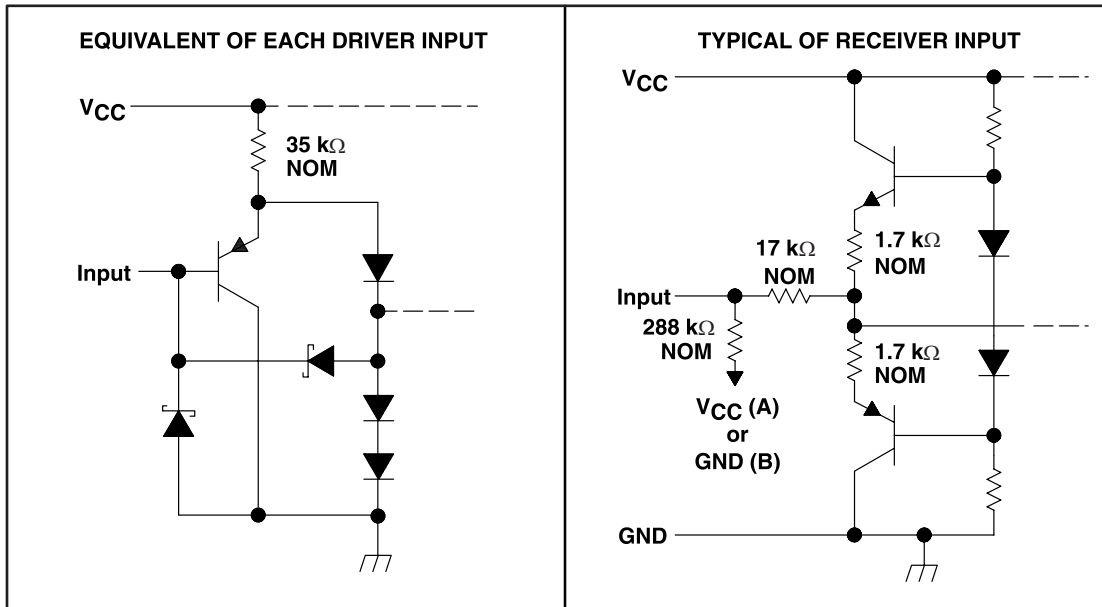

DIFFERENTIAL A-B	ENABLE \overline{RE}	OUTPUT R
$V_{ID} \geq 0.2\text{ V}$	L	H
$-0.2\text{ V} < V_{ID} < 0.2\text{ V}$	L	?
$V_{ID} \leq -0.2\text{ V}$	L	L
X	H	Z

- (1) H = high level, L = low level, ? = indeterminate, X = irrelevant,
Z = high impedance (off)

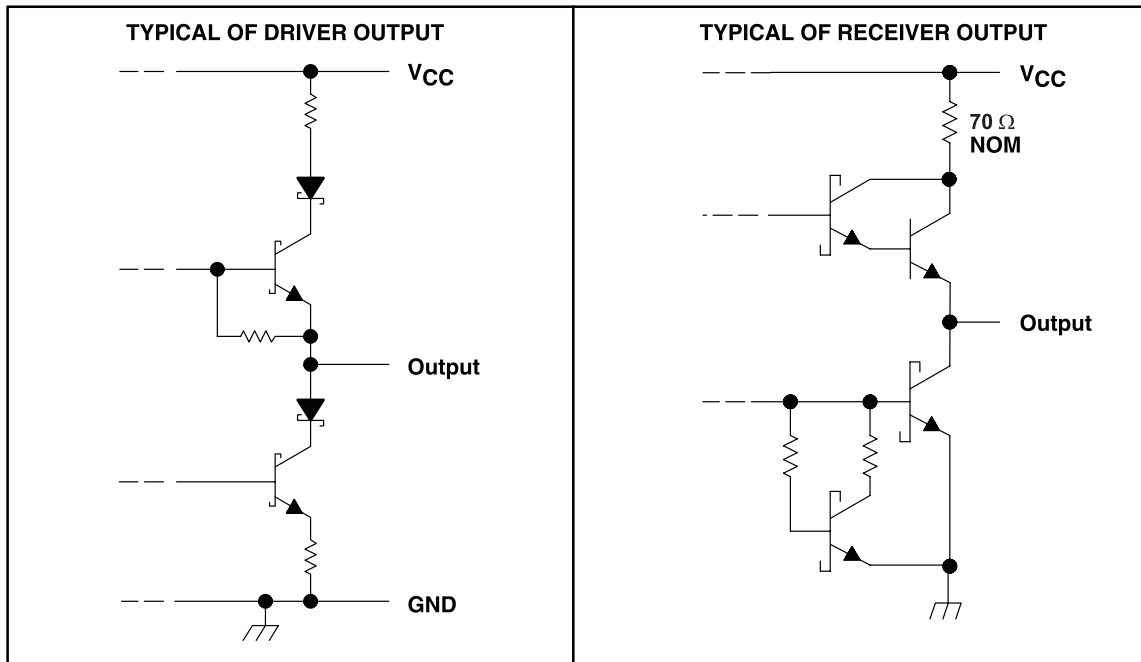

LOGIC DIAGRAM (POSITIVE LOGIC)

SCHEMATICS OF INPUTS

SCHEMATICS OF OUTPUTS

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply voltage range ⁽²⁾		7	V
	Input voltage range	D, DE, and \overline{RE} inputs		7 V
	Output voltage range	Driver		–9 14 V
	Input voltage range	Receiver		–14 14 V
	Receiver differential input voltage range ⁽³⁾	–14	14	V
θ_{JA}	Package thermal impedance ⁽⁴⁾⁽⁵⁾	N package		80
		NS package		76
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260	°C
T _{stg}	Storage temperature range	–65	150	°C

- (1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential input voltage, are with respect to network ground terminal.
- (3) Differential input voltage is measured at the noninverting terminal with respect to the inverting terminal.
- (4) Maximum power dissipation is a function of T_{J(max)}, θ_{JA} , and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $PD = (T_{J(max)} - T_A) / \theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (5) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage	4.75	5	5.25	V
V _{OC}	Common-mode output voltage ⁽¹⁾	Driver		12	V
V _{IC}	Common-mode input voltage ⁽¹⁾	Receiver		12	V
V _{IH}	High-level input voltage	D, DE, and \overline{RE}		2	V
V _{IL}	Low-level input voltage	D, DE, and \overline{RE}		0.8	V
V _{ID}	Differential input voltage			±12	V
I _{OH}	High-level output current	Driver		–60	mA
		Receiver		–400	μA
I _{OL}	Low-level output current	Driver		60	mA
		Receiver		8	
T _A	Operating free-air temperature	0		70	°C

- (1) The algebraic convention, where the less positive (more negative) limit is designated as minimum, is used in this table for common-mode output voltage level only.

Driver Section

ELECTRICAL CHARACTERISTICS

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT
V _{IK}	Input clamp voltage	I _I = -18 mA				-1.5	V
V _O	Output voltage	I _O = 0		0		6	V
V _{OD1}	Differential output voltage	I _O = 0		1.5		6	V
V _{OD2}	Differential output voltage	V _{CC} = 5 V, R _L = 100 Ω	See Figure 1	1/2 V _{OD1}		5	V
		R _L = 54 Ω		2	2.3		
V _{OD3}	Differential output voltage	V _{test} = -7 V to 12 V,	See Figure 2	1.5		5	V
Δ V _{OD}	Change in magnitude of differential output voltage	R _L = 54 Ω or 100 Ω,	See Figure 1			±0.2	V
V _{OC}	Common mode output voltage	R _L = 54 Ω or 100 Ω,	See Figure 1	3		-1	V
				-1			
Δ V _{OC}	Change in magnitude of common-mode output voltage ⁽²⁾	R _L = 54 Ω or 100 Ω,	See Figure 1			±0.2	V
I _{OZ}	High-impedance-state output current	V _O = -7 V to 12 V ⁽³⁾				±100	μA
I _{IH}	High-level input current	V _{IH} = 2.4 V				20	μA
I _{IL}	Low-level input current	V _{IL} = 0.4 V				-100	μA
I _{OS}	Short circuit output current	V _O = -7 V				-250	mA
		V _O = V _{CC}				250	
		V _O = 12 V				250	
		V _O = 0 V				-150	
I _{CC}	Supply current (total package)	No load	Outputs enabled		21	30	mA
			Outputs disabled		14	21	

(1) All typical values are at V_{CC} = 5 V and TA = 25°C.

(2) Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.

(3) This applies for both power on and power off. Refer to TIA/EIA-485-A for exact conditions

SWITCHING CHARACTERISTICS

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT
t _{dD}	Differential output delay time, tdDH or tdDL	R _L = 54 Ω,	C _L = 50 pF, See Figure 3	9	13	20	ns
t _{sk(p)}	Pulse skew (tdDH - tdDL)	R _L = 54 Ω,	C _L = 50 pF, See Figure 3		1	8	ns
t _t	Differential output transition time	R _L = 54 Ω,	C _L = 50 pF, See Figure 3	3	10	16	ns
t _{pZH}	Output enable time to high level	R _L = 110 Ω,	See Figure 4		36	53	ns
t _{pZL}	Output enable time to low level	R _L = 110 Ω,	See Figure 5		39	56	ns
t _{PHZ}	Output disable time from high level	R _L = 110 Ω,	See Figure 4		20	31	ns
t _{PLZ}	Output disable time from low level	R _L = 110 Ω,	See Figure 5		9	20	ns

(1) All typical values are at V_{CC} = 5 V and TA = 25°C.

Receiver Section

ELECTRICAL CHARACTERISTICS

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT	
V_{T+}	Positive-going threshold voltage, differential input	$V_O = 2.7\text{ V}$,	$I_O = -0.4\text{ mA}$			0.2	V	
V_{T-}	Negative-going threshold voltage, differential input	$V_O = 0.5\text{ V}$,	$I_O = 8\text{ mA}$	-0.2			V	
V_{hys}	Input hysteresis ($V_{T+} - V_{T-}$)				60		mV	
V_{IK}	Input clamp voltage, \overline{RE}	$I_I = -18\text{ mA}$				-1.5	V	
V_{OH}	High-level output voltage	$V_{ID} = 200\text{ mV}$,	$I_{OH} = -400\text{ }\mu\text{A}$, See Figure 6	2.7			V	
V_{OL}	Low-level output voltage	$V_{ID} = 200\text{ mV}$,	$I_{OL} = 8\text{ mA}$, See Figure 6			0.45	V	
I_{OZ}	High-impedance-state output current	$V_O = 0.4\text{ V to } 2.4\text{ V}$				± 20	μA	
I_I	Line input current	Other input at 0 V ⁽²⁾ ,	$V_I = 12\text{ V}$			1	mA	
			$V_I = -7\text{ V}$			-0.8		
I_{IH}	High-level input current, \overline{RE}	$V_{IH} = 2.7\text{ V}$				20	μA	
I_{IL}	Low-level input current, \overline{RE}	$V_{IL} = -7\text{ V}$				-100	μA	
R_I	Input resistance			12			k Ω	
I_{OS}	Short circuit output current	$V_{ID} = 200\text{ mV}$,	$V_O = 0\text{ V}$	-15		-85	mA	
I_{CC}	Supply current (total package)	No load	Outputs enabled			21	30	mA
			Outputs disabled			14	21	

(1) All typical values are at $V_{CC} = 5\text{ V}$ and $T_A = 25^\circ\text{C}$.

(2) This applies for both power on and power off. Refer to TIA/EIA-485-A for exact conditions

SWITCHING CHARACTERISTICS

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT
t_{PHL}	Differential output delay time, td_{DH} or td_{DL}	$V_{ID} = -1.5\text{ V to } 1.5\text{ V}$		10	16	25	ns
t_{PLH}	Propagation delay time, low- to high-level output	$V_{ID} = -1.5\text{ V to } 1.5\text{ V}$		10	16	25	ns
$t_{sk(p)}$	Pulse skew ($ td_{DH} - td_{DL} $)	$V_{ID} = -1.5\text{ V to } 1.5\text{ V}$			1	8	ns
t_{PZH}	Output enable time to high level				7	15	ns
t_{PZL}	Output enable time to low level				9	19	ns
t_{PHZ}	Output disable time from high level				18	27	ns
t_{PLZ}	Output disable time from low level				10	15	ns

(1) All typical values are at $V_{CC} = 5\text{ V}$ and $T_A = 25^\circ\text{C}$.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
